Founded:

1996

Overview:

Visual Mining's performance management dashboard and data visualization solutions have helped organizations transform data into actionable information for more than 15 years. Visual Mining's self-service business intelligence (BI) solutions empower executives, managers, and staff to independently visualize, analyze, explore, understand and consume data from across their organization – enabling them to make better informed decisions and produce superior outcomes. Visual Mining's award winning NetCharts software enables software OEMs and developers to visually display critical performance information on websites, in dashboards or within their own applications. Visual Mining solutions empower business leaders to quickly move from Insight to Action to drive organizational performance and produce better results.
