

Visual Mining announces CIBC as a new client of NetCharts Pro

Rockville, Maryland - March 4, 2004 - Visual Mining, Inc., a leading developer of graphical reporting solutions, today announced that CIBC is using NetCharts Pro in their financial planning software suite of tools.

To shorten development time, CIBC decided to utilize Visual Mining's NetCharts Pro to fulfill their graphing and charting needs, rather than develop their own charting software. Integration of NetCharts Pro allows CIBC's software to illustrate information in a graphical format.

"Better and faster financial analysis through the use of graphs enhances our customers' ability to visualize and understand the information being presented," said Paul Yu, Director of Technology at [CIBC](#). "NetChart Pro's library of charts and graphs, and ease of integration motivated us to make the decision to go with an existing solution. NetCharts Pro allowed us to offer data visualization in our software much more quickly."

Visual Mining's interactive graphical reporting solutions, such as those used in the CIBC application, greatly increase the accessibility and comprehension of data, which allows people to make better decisions.

"CIBC's strong commitment to create value for their customers reflects well on the quality of our solutions," said Michael MacDonald, Chief Executive Officer and Founder of Visual Mining, Inc. "Our technical development and support staff take great pride in producing the world's best data visualization tools - and having our tools used in a financial planning application from a company such as CIBC helps validate the strength of our claim."

About Visual Mining, Inc:

Visual Mining builds interactive graphical reporting solutions for business and government organizations needing maximum software flexibility, high performance, and low cost. Visual Mining produced the first Java-powered charting engine in 1996. Since then, Visual Mining's NetCharts products have earned numerous industry awards, most recently, the 2003 Intelligent Enterprise Magazine's Readers' Choice Award for data visualization software.
