

Visual Mining Releases Upgrade for NetCharts® Pro - The Ultimate Java Programmer's Graphing Library

Rockville, Maryland - April 27, 2004 - Visual Mining, Inc., developer of the "Best Intelligence IT Solution for Data Visualization," announces the general release of their popular object-oriented graphing library, NetCharts® Pro v4.5.

The NetCharts® Pro API gives Java developers complete control over graph presentation and behavior in either a servlet or a client-side Java application. Since 1996, Visual Mining's NetCharts data visualization technology has been integrated into numerous OEM solutions and thousands of end-user systems with dynamic, interactive chart and graph capabilities.

"NetChart Pro's library of charts and graphs, and ease of integration motivated us to make the decision to go with an existing solution," said Paul Yu, Director of Technology at CIBC. "NetCharts Pro allowed us to offer data visualization in our software much more quickly."

"In today's competitive global market, there is a tremendous demand for businesses to improve organizational and operational efficiency while holding the line on costs - Visual Mining's NetCharts® products provide application developers powerful visual reporting features, without astronomical prices or lengthy integration cycles," said Michael MacDonald, Chief Executive Officer and Founder of Visual Mining, Inc. "Our customers know we build our software to work flawlessly in virtually any environment, with a well-developed feature set so that the build vs. buy decision is any easy one. With NetCharts Pro, developers can focus on the task, and not the tool."

About Visual Mining, Inc:

Visual Mining builds interactive graphical reporting solutions for business and government organizations needing maximum software flexibility, high performance, and low cost. Visual Mining produced the first Java-powered charting engine in 1996. Since then, Visual Mining's NetCharts products have earned numerous industry awards, most recently, the 2003 Intelligent Enterprise Magazine's Readers' Choice Award for data visualization software.
