

## **Visual Mining Releases Updated NetCharts Server and NetCharts Designer**

Advances include enhanced Web 2.0 features, improved template design

**TDWI World Conference, Chicago IL – May 13, 2008** – Visual Mining™, the premier provider of advanced data visualization and performance dashboard solutions used for Business Performance Management (BPM) and Business Intelligence (BI) Applications, today announced the availability of version 5.5 of its NetCharts Server and NetCharts Designer products. This significant release helps clients leverage information as a strategic asset and improve the overall customer experience. Initially launched in 2004, the software products enable developers to create secure, flexible, and easily customizable BPM and BI Applications.

For highly scalable, high-performance dashboard and data visualization applications, the combination of NetCharts Server and Designer is the simplest and easiest way to improve an application's front end presentation layer. Customers can expect to achieve a reduction in the time it takes to develop, deploy, and manage such applications with:

- Openness and flexibility in retrieving data from multiple data sources with automatic refresh
- Simple process for designing rich Web 2.0 dashboards without coding
- Extensive chart gallery with pre-built templates to speed development
- Easily configured interactivity – roll-overs, drill-down, pop-up, scrolling, and zoom
- Built-in administration consoles

“Visual Mining will continue to incorporate valuable new features and functionality into its software,” said Tristan Ziegler, CEO of Visual Mining. “We are pleased to make this announcement in conjunction with our presence as an exhibitor at the 2008 TDWI World Conference, Booth 514, where attendees can see how our comprehensive solutions provide the features, flexibility and performance needed to create dynamic and flexible performance dashboards and data visualization solutions, regardless of where the data resides.”

### ***New NetCharts Features Build on Core Capabilities***

Enhancements to Visual Mining's NetCharts Server and Designer performance dashboard solutions are designed to significantly reduce the complexity and time developers spend creating charts, graphs, reports, and dashboards. They include:

- Greater administrative control over installation configuration
- New performance tuning and memory management configuration options.
- GUI, Navigation control and usability improvements based on Eclipse IDE Platform version 3.3
- AJAX-enabled dashboards allow updates to individual dashboard elements without full page reloads
- Data Wizard updated to use latest drivers and wizard support for new databases
- Improved color palettes and ability to maintain custom color palette definitions between sessions
- Newly styled chart templates with simplified customization
- New pre-defined table styles that streamline table element customization

### **About Visual Mining, Inc.**

Visual Mining develops innovative graphical reporting, visual analytics, and performance dashboards for Business Performance Management. Visual Mining produced NetCharts® as the industry's first commercial Java-based charting engine. Thousands of customers worldwide, from Fortune 100 companies to start-ups, from financial services to healthcare utilize Visual Mining's award-winning solutions to transform their data into actionable information. Information about the company's products and services is available at [www.visualmining.com](http://www.visualmining.com).
